BIG MAX RICE INTERCEPTOR

Specification: MIFAB® Series BIG-____ R (indicate model) HDPE rotationally molded rice interceptor with a liquid holding capacity of _____ (indicate). Interceptor has a limited lifetime warranty and is made in the USA out of seamless, rotationally molded High Density Polyethylene with a 3/8" uniform wall thickness. Interceptor is designed for above or below ground installation and includes extension pipe gasket for ADS 18N12 (pipe not included) for the adjustable lid system, sample port access, dual strainer baffles with 3/8" diameter holes (1/2" apart), deep seal trap covered by the lid and 4" no hub inlet and outlet connections. Ductile iron pickable lids, H-20 rated, proof-load tested to 40,000 lbs. provide a water / gas tight seal. The lids are designed in accordance with the loading requirements of AASHTO H-20. The high density polyethylene material is PE 3135 from Dow 9.39 with a density of 0.939 g/cm3. For indoor / outdoor use.

Function: Used in food processing plants and restaurant facilities that have a lot of rice to receive waste water. The rice interceptor will filter out rice from the fixture waste line before entering the pipe system to reduce clogging and improve performance. Typically installed either on or into the floor. Narrow width permits access through doorways and down stairwells. High Density Polyethylene construction ensures a lightweight installation process (two people can move and install it). Regular maintenance is required to keep the interceptor functioning. All Big Max interceptors can withstand a maximum operating temperature: 150° F.
