

MIFAB UNIVERSAL ACCESS DOOR FEATURES

WHITE FINISH

All of MIFAB's access doors are painted white. Most access doors are painted over during installation to match the finished walls/ceilings. White is easier to paint over than the typical dark colors offered by others because fewer coats of paint are required to cover the white finish. Alternatively, installers can use MIFAB's factory white finish as the finished color to match white walls/ceilings.

ROUNDED OUTSIDE CORNERS

MIFAB's UA, MPFR and MFRU access doors are manufactured with rounded outside corners for maximum safety, ease of handling, and clean appearance.

14 GAGE CONSTRUCTION

MIFAB's UA, MDW, CAD, CAD-DW, CAD-FL, CAD-PL and CAD-FL-PL access doors are manufactured with 14 gage satincoat steel for maximum strength and durability.

TURNBACK

MIFAB's UA, MDW, CAD-FL and CAD-FL-PL access doors are manufactured with a 1/4" turnback in the door panel. This turnback strengthens the door panel. This is especially important on the larger sizes of access doors installed in ceiling applications where there is more flexibility in the door panel. The combination of the 14 gage steel material and 1/4" turnback results in the most durable access doors available, ensuring that the doors remain flush with their frame when suspended in ceilings.
