### Lil-PL Specification:
MIFAB® Lil-PL HDPE injection molded plaster interceptor with flow rating of ____ (indicate) and solids storage holding capacity of ____ (indicate). Unit shall include: two internal straining baffles (first one has 3/8” x 1.25” long slots and the second one has 1/4” diameter holes spaced 1/2” apart, and HDPE injection molded, non skid, rectangular gasketed lid with securing latches. For indoor/outdoor use. For indoor/outdoor use.

### Function:
Plaster interceptors are required anywhere that solids may be introduced into the public sewer system in applications such as: barber shops, dentist offices, salons, artist studios, laundry facilities, machine shops, food waste, parking lots, car washes, food processing, livestock and agricultural drainage. These wastes must be separated before entering the sewer system. Typically installed either on or recessed in the floor. The plaster interceptor will filter out plaster and sediment from the fixture waste line before entering the pipe system to reduce clogging and improve performance. Interceptor is cleaned by removing the top gasketed lid and accessing the internal sediment bucket. Simple latch design permits fast and easy removal of the lid for cleaning and maintenance. HDPE injection molded body and lid are covered by a limited lifetime warranty. All Lil Max interceptors can withstand a temperature of up to and including 180 degrees Fahrenheit.
