MI-NEUT

NEUTRALIZATION TANK

Specification: MIFAB® Series MI-NEUT solid construction seamless polyethylene body with inlet and outlet, optional vent connections, acid resistant epoxy coated bolted down neoprene gasketed lid, stainless steel hardware. The tank is filled with neutralization medium, lump limestone 1" to 3" diameter size, water is then added to the tank to help dilution.

Function: Used in laboratories, industrial processes or other polluting sources to dilute and neutralize harmful wastes that may be discharged. Also used in chemical treatment plants or municipal water treatment facilities for diluting polluted effluent.

Task Maintenance: A routine maintenance every one to three months is required. Be aware that maintenance might be more frequent due to the amount of waste going through the unit. The MI-NEUT will not operate efficiently if proper maintenance is not performed.
