

H.D.P.E. Wet Waste Interceptor, Part No. MINI-PL

Municipalities require grease interceptors to protect our environment. Unfortunately, a large percentage of clogs occur **BEFORE** waste water gets to the grease interceptor. Our solution... **Mini Max®** Wet Waste Interceptor!

Installed directly under any sink right after the P-Trap*, the **Mini Max®** intercepts 95% of all solids, wet waste, and food particles AT SOURCE.

*No P-trap required when draining into a floor sink or any type of open drain

Mini Max® Benefits

- **Eliminates Foul Odors** – by capturing wet waste solids before food decomposition
- **Reduces Cleaning** – of both grease interceptor and drain line. Less accumulation means less cleaning!
- **Eliminates Back Ups** – by intercepting 95% of FOG and food particles
- **Minimizes Grease Trap Pumping** – less accumulation of solid waste means fewer pump outs.
